SUMMARY

Aspiring Data Science and Machine Learning Engineer skilled in Python, data analysis, and machine learning algorithms. Experienced in building end-to-end ML projects including data preprocessing, model building, and deployment using Streamlit. Passionate about solving real-world problems using data-driven approaches.

EDUCATION

Kamla Nehru Institute of Technology (KNIT) Sultanpur

B.tech in Information Technology - CGPA : 8.14 / 10.00 (till 4th Semester)

Relevant Coursework: Machine Learning, Data Structures And Algorithms, OOPS, DBMS, Operating System

Diploma In Computer Science Engineering

Aug ` 21 -June ` 25

WORK EXPERIENCE

Front End Developer Intern, Oasis Infobyte Delhi

June ` 25-July

- Developed responsive user interfaces using HTML, CSS, and JavaScript
- Built interactive components using React.js
- Fixed UI bugs and enhanced user experience

Content Research Intern,STBG

Jan ` 2-March ` 30

- Collected and analyzed content/data from multiple sources
- Performed basic data analysis to identify trends and comparisons
- Organized and structured data for easy analysis and reporting

SKILLS

Programming Languages : Python ,JavaScript

Data Analysis & Machine Learning: Pandas, NumPy ,Machine Learnings,and Deep Learning

Generative AI: LLMs, Prompt Engineering, RAG, Groq API, OpenAI API, Gemini API

DataBase: MySQL

Frameworks & Libraries: React.js, FastAPI, LangChain

Tools:Git,Github,Vs Code

PROJECTS

AI Interview Copilot

- Built an AI Interview Copilot for resume-based mock interviews with intelligent feedback and scoring.
- Created an AI Interview Copilot that generates personalized interview questions and evaluates responses.
- Enabled students to explore company-specific interview patterns and placement preparation resources.
- Integrated company-wise hiring information, including current openings, eligibility criteria, and recruitment processes.

Movies Recommendation System Github : <https://github.com/Rohit-chaurasiya2525/Movies-Recommend-system>

- Extracted and transformed movie metadata to generate meaningful feature representations
- Designed an efficient pipeline for processing and retrieving relevant movie suggestions
- Engineered a personalized movie recommendation engine using machine learning techniques
- Improved user experience by providing instant recommendations based on content preferences

ACHIEVEMENTS

- Solved 300+ problems on LeetCode **Link** : <https://rb.gy/fxc64b>
- Built an AI-powered chatbot using LLMs for intelligent question answering
